USER RESEARCH — HOME GARDENERS & PLANT OWNERS (N=20 INTERVIEWS)

Primary pain point

70%

forget watering schedules for multiple plants

Decision driver

64%

want plant-specific care, not generic reminders

App checks per week

5.6

avg check-ins on plant health/status

Plant loss rate

48%

lost at least one plant to neglect in past year

KEY INSIGHTS

- Beginners don't know care needs differ by plant species — one-size reminders fail
- Overwatering is as common a killer as underwatering, but rarely warned against
- Users want photo-based plant identification when they don't know a plant's name
- Sunlight and humidity conditions are hard to judge without guidance
- Visual progress tracking (growth photos) increases motivation to keep caring
- 82% prefer push notifications over email for care reminders

HMW Statement

How might we help beginner plant owners keep their plants alive by giving personalized, species-specific care reminders that adapt to their home environment?

USER PERSONAS

MP

Meera, 26

Working professional, Chennai

Beginner

Busy schedule

Indoor plants

Wants simple reminders that fit around a 9-6 job

Keeps forgetting which plant needs what

SK

Suresh, 34

Balcony gardener, Bangalore

Hobbyist

10+ plants

Data-driven

Tracks growth and wants detailed care logs

Needs a system to manage many plants at once

NR

Nisha, 20

College student, Mumbai

First plant

Low budget

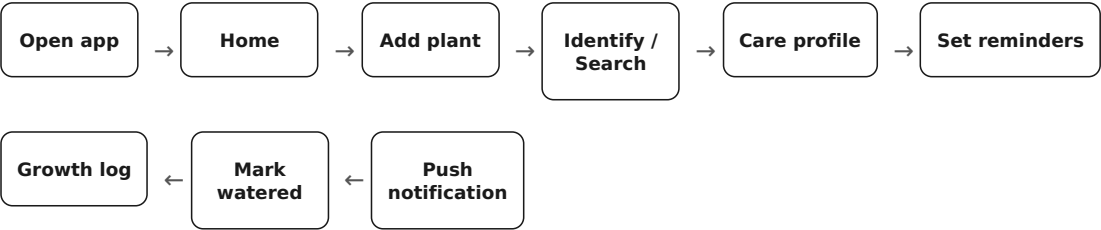

Visual learner

Got a succulent as a gift, has no idea how to care for it

Wants photo identification and simple explanations

DESIGN THINKING PROCESS

1 — Empathise

20 user interviews, home visits to 3 plant owners, competitive audit of 4 plant-care apps. Discovered beginners feel guilty and overwhelmed, not excited, when a plant dies.

Interviews

Home visits

Competitive audit

2 — Define

Synthesised into an affinity map. Three core problem themes: Knowledge gap, Inconsistent reminders, and Lack of feedback on plant health.

Affinity map

POV statements

3 — Ideate

Crazy 8s workshop produced 48 concepts. Dot-voted to 5 concepts. Key bets: photo-based plant ID, adaptive watering schedule, and growth photo timeline.

4 — Prototype

Paper sketches → these digital wireframes → interactive Figma prototype (next). Prioritised 5 screens covering the core care loop end-to-end.

5 — Test (planned)

5-participant usability test targeting successful plant setup. Key tasks: add a new plant, identify by photo, set a reminder. SUS score + task completion rate as KPIs.

Design Decisions

Photo-first plant identification removes need for manual search. Adaptive reminders adjust to season and location. Growth log surfaced on home, not buried in settings.
